Graduate Software Developer - Description

Cohort Solutions
Cohort Solutions develops products for international students to reduce the cost and complexity of studying internationally. We have a number of services where we work with education providers, education agents, students and their families.

Purpose
Cohort Solutions has a number of technical components operating the various products that we offer. We’re looking to grow our technical team to both improve our current products and develop additional products.

Reporting Structure
The position will report directly to the CTO

Key Accountabilities
A Graduate Developer is responsible for assisting in the development of the company’s many technical products. This includes:

- Analysis
- Feature Design & Development
- Testing
- Deployment
- System Administration
- Research

Remuneration
This is a permanent, full-time position. Remuneration will be at competitive market rates.

Skills/Qualifications
The candidate will ideally possess the following skills/qualities:

- Deep interest in software development
- Experience with web application development
- Good history of being self-motivated

The following qualities are desirable, but not required:

- Experience using a Ruby on Rails/Heroku/PostgreSQL stack
- Experience in Client-side Javascript Development (Experience in React.js would be a huge plus)
